

Klippon® Protect – EMC optimisation

Protect your system even better

Improve the Electromagnetic Compatibility (EMC) of your enclosure

Optimally adapted and functional enclosures make an important contribution to increasing the safety, performance, and cost-effectiveness of many industrial applications.

The customised Klippon® Protect enclosure solutions can now be adapted even more precisely to your needs with optimised EMC shielding. Our engineers will design an enclosure solution that best suits your specific EMC requirements. Among other design adaptations, the special EMC gaskets enable optimal shielding of sensitive active components and thus increase functional reliability. Furthermore, a wide range of EMC cable glands for different applications is available for the perfect protection of your components.

Your special advantages:

- Additional EMC gaskets can be integrated for improved electromagnetic compatibility
- Selection of special cable glands and further accessories to protect sensitive electronics
- Fulfilment of all common industrial requirements for empty enclosures
- Customisation and configuration using the Engineer-to-Order (EtO) process
- Individual test reports for the EMC shielding value are provided on request
