## Workplace Solutions
THM MultiMark LPC
Equipment labelling made easy

WORKPLACE SOLUTIONS

Automatic labelling
The new high-performance applicator automatically lifts the label from the liner and reliably applies it to components with a height of up to 150 mm.
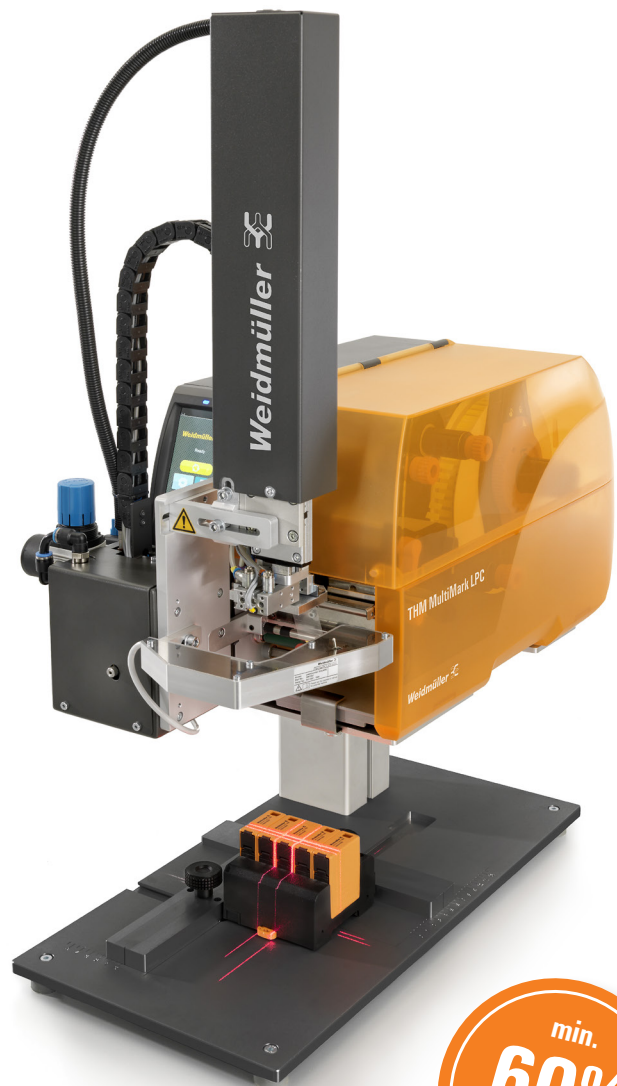

Laser-assisted alignment
Using a laser, the label outline is fully projected onto the product surface up to a height of 120 mm to enable fast and correct alignment of the component to be marked.

High repeatability
Thanks to the practical stops, components of the same size can be aligned extremely efficiently and labelled with high accuracy.

min. **60%** time savings

THM MultiMark LPC
Fast and efficient labelling of components.

Experience how with the new Labeling Processing Center equipment labels are correctly positioned, printed and printed and applied immediately.

Labeling Processing Center for half-automatic component labelling

A wide variety of equipment is used in control panel building. These are often marked with labels. The labels have to be peeled manually from the liner and applied to the components. The work is laborious and time-consuming, and the result is not always convincing. Often the label sits crooked, wrinkled or protrudes beyond the edge of the device.

The new THM MultiMark LPC makes equipment labelling quick and easy.

Thanks to the new THM Multimark Labeling Procession Center, the tedious application of labels with screwdrivers or tweezers is no longer necessary. A laser projects the label outline onto the product surface to enable correct positioning of the component. Ergonomically, a foot switch starts the printing and application process. In just a few seconds, the component is precisely labelled.

- Fast and efficient labelling of components
- Laser-assisted projection for correct component positioning
- High repeatability due to adjustable stops
- High ergonomics due to foot switch
- Compatible with most component geometries
- Conveniently controlled via the M-Print® PRO software

Automatic labelling

Software
Intuitive to use and tailored to your needs. M-Print® PRO software makes importing, editing and managing data a breeze.

Marker
Constructive solutions for all applications around the control cabinet. From heat shrink tubing to metal markers.

Printer
Ink or thermal transfer technology - industrial printing systems for all requirements. Designed with the future in mind.
