Permanent labelling of cables in harsh environments

Printing service for laser inscription of metal markers

For large projects in harsh industrial environments, permanently marking many different cables quickly becomes a challenge. Laser-inscribed metal markers are the best solution here.

Our Weidmüller printing service creates laser-inscribed metal markers according to your specifications. The inscribed cable markers made of stainless steel or aluminium meet the highest marking quality demands. This is why they are particularly suitable for harsh environmental conditions such as on offshore platforms, in the food industry, rail construction, or in photovoltaic systems.

Benefits:

- Robust laser inscription for use in harsh industrial environments
- Marker strips with printed project information for pre-sorting according to project areas
- No investment in laser print system required
