

Wind Solutions

The new BLADEcontrol® WebVis

Your rotor blades always in sight

Take advantage of our new WebVis. The dashboard offers a quick overview of the entire turbine portfolio. Both sidebars are collapsible, the contents logically grouped. Various filter functions, direct switching to other turbines and time range selection enable you to work effectively.

Your advantages:

- Dashboard: All data at a glance
- Intuitive operation
- Greater data depth
- Display of measurement values in relation to the operating states of the wind turbine
- Direct contact with our monitoring experts
- Documentation of all ice shutdowns of the winter season in compliance with official regulations

BLADEcontrol® WebVis

All data at a glance

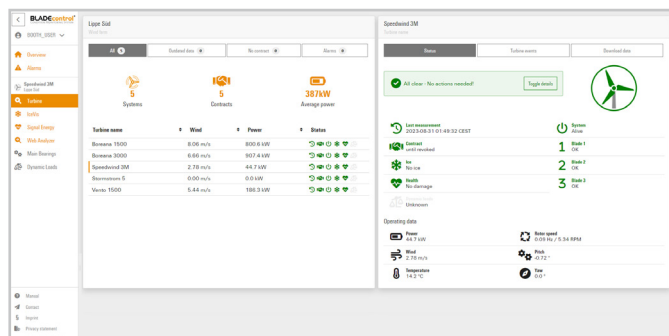

Dashboard

The start page shows the most important data at a glance. A large selection of filters on the right-hand side makes work easier. The sidebars can be collapsed with a simple click if required. A click on the "Turbines" button next to the dashboard will lead you to the turbine overview. The current status and visualizations of individual turbines can be accessed by clicking on the turbine or directly on the icons.

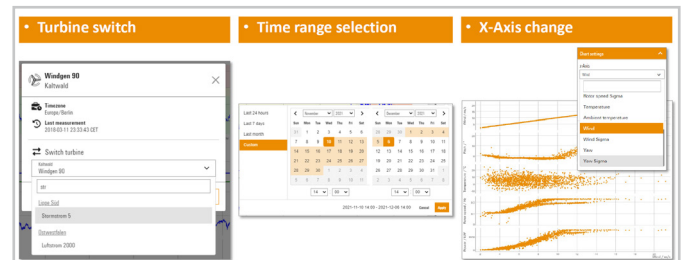

Turbine information

Detailed information is available for each turbine. If you have any questions about the status, please contact our monitoring experts directly via the contact button on the bottom left.

Detail evaluations

Using a wide range of selection options, the data obtained can be evaluated with reference to the relevant turbine parameters. This enables fast and targeted root cause analysis. Our new features, such as being able to quickly switch from one turbine to the next, make work more convenient.

Have we made you curious? We would be happy to inform you on all innovations in the current version of our WebVis.

Let's discuss your specific project!
Make an appointment with us or send us an e-mail.

We look forward to a dialogue with you!
